Ajay P

Technical Lead · Full-Stack Engineer — Systems, Cloud & DevOps, AI Automation

Calicut, Kerala, India · ajaypaju008@gmail.com · ajaypaju.github.io · linkedin.com/in/ajaypofficial · github.com/ajaypaju

Summary

Technical Lead with 5+ years designing, building and running production systems, including a production multi-tenant SaaS platform used by 500+ organizations. Own architecture, cloud infrastructure on AWS and Cloudflare, and production reliability; lead AI integration and automation: a role-based MCP server, a Claude Code integration that turns prompts into tasks, AI bot users and LLM-powered chat. Cut reporting API latency from ~900 ms to ~300 ms.

Technical Skills

- **AI & Automation:** LLM API integration, MCP servers, Claude Code, AI agents and bot users, prompt engineering
- **Backend:** PHP, Laravel (9–13), Node.js, NestJS, REST APIs, queues and background jobs
- **Cloud & DevOps:** AWS (EC2, S3, RDS), Cloudflare, server management, web servers, Docker, GitLab CI/CD, GitHub, Linux, monitoring
- **Databases:** MySQL, MongoDB, Redis
- **Architecture & Security:** multi-tenant SaaS, caching, webhooks, system design, OAuth2 SSO, RBAC
- **Frontend:** HTML, CSS, JavaScript; React and TypeScript (portfolio site)

Experience

Infinite Open Source Solutions LLP · Calicut, Kerala

Technical Lead · Apr 2026 – Present

- Own backend architecture, technical delivery and production reliability for the platform.
- Built a role-based MCP server that exposes the platform's data and actions to AI clients, scoped to each user's role and permissions.
- Connected Claude Code to the platform so a plain-language prompt creates tasks automatically.
- Introduced AI bot users: agent accounts that are assigned tasks like any team member and carry out automated work.
- Built LLM-powered chat workflows for in-product help and assisted automation.
- Manage production servers and infrastructure on AWS (EC2, RDS, S3) and Cloudflare: request flow and traffic routing, web servers, Docker, monitoring and deployment workflows, including on-premise deployments.
- Mentor junior developers, review pull requests, set engineering standards, coordinate releases with Product and QA.

Software Engineer · Oct 2021 – Mar 2026

- Built Laravel REST APIs and frontend modules for time tracking, project management, leave workflows, screenshot capture, activity logging and reporting.
- Cut reporting API latency from ~900 ms to ~300 ms and improved report generation speed 60% through MySQL query optimization and Redis caching.
- Designed and optimized MySQL and MongoDB schemas for backend and reporting workloads.
- Integrated Stripe, Razorpay, AWS S3, email/SMS, webhooks and OAuth2 SSO.
- Implemented RBAC with Laravel policies and middleware; built queue-based background jobs and data-aggregation pipelines.
- Shipped features through CI/CD workflows, code reviews and release support.

Project

- **Portfolio — ajaypaju.github.io**: React, TypeScript, Vite and Tailwind CSS, built with Claude Code. Animated request-flow architecture map, terminal mode and command palette; Lighthouse 100 across all four categories, zero accessibility violations, automated GitHub Pages deployment.

Awards

- Winner, company-wide AI Prompt Engineering Challenge
- Best R&D Team Performer (2023–2025)
- Best Programmer Award (2022)

Education

B.Sc. Computer Science — People's Co-operative Arts and Science College, Kasaragod · 2020
